Policy on Collaborations and health services

1. Purpose & Strategic Alignment:

Batterjee Medical College (BMC) has established this policy to formalize its steadfast commitment to advancing SDG3 through a robust network of strategic healthcare partnerships. At BMC, these alliances are viewed not merely as operational agreements, but as integral components of our core institutional strategy. By cultivating an integrated ecosystem that unites academic institutions, healthcare providers, government authorities, and global centers of excellence, BMC actively works to bridge workforce gaps, stimulate clinical innovation, and elevate public health outcomes. These collaborative efforts serve as a foundational pillar for our institution, ensuring that our educational output consistently meets the highest standards of care, enriching community resilience, and delivering sustainable societal impact locally and globally. Ultimately, these partnerships provide our students with unparalleled clinical exposure, expansive research opportunities, and clear career pathways.

2. Collaboration Framework

To effectively operationalize our commitment to SDG3 and address healthcare needs across multiple levels, BMC has organized its institutional partnerships into a comprehensive, three-tiered framework:

A. Local Collaborations (Community & Clinical Synergy)

- **Focus Area:** Deep integration into the healthcare ecosystem of Jeddah and the wider Western Region.
- **Key Partners:** Accredited medical and dental centers, local hospital networks, public health clusters, and campus wellness providers.
- **Strategic Objectives:** These partnerships are designed to facilitate hands-on clinical training, create direct employment pipelines for graduates, and deliver immediate health services to the local community.

B. National Collaborations (Vision 2030 Alignment)

- **Focus Area:** Operating at the state level to support the Kingdom of Saudi Arabia's Vision 2030 and National Health Transformation priorities.
- **Key Partners:** Government regulatory bodies, ministries (including the Ministry of Health, Saudi Red Crescent Authority, and the Ministry of Environment, Water and Agriculture), the Saudi Commission for Health Specialties, non-governmental organizations (NGOs), and specialized medical centers.
- **Strategic Objectives:** These state-level alliances focus on clinical capacity building, fostering social responsibility, advancing medical technology and biomanufacturing, and promoting national healthcare sustainability.

C. Global Collaborations (International Benchmarking & Innovation)

- **Focus Area:** Maintaining global alignment in health professions education and driving clinical innovation.
- **Key Partners:** Premier international medical systems, global universities, international medical boards and authorities.
- **Strategic Objectives:** This tier emphasizes curriculum development, global academic articulation, international knowledge transfer, joint research initiatives, and pioneering specialized educational pathways such as global health and wellness tourism.
